1. Examine the UML class diagram to the right. Implement the Book class such that the following *Example code* produces the *Expected output*.

***Example code***

```
Book myBook = new Book("Peter and Wendy", "J.M. Barrie");
myBook.printBookInfo();
```

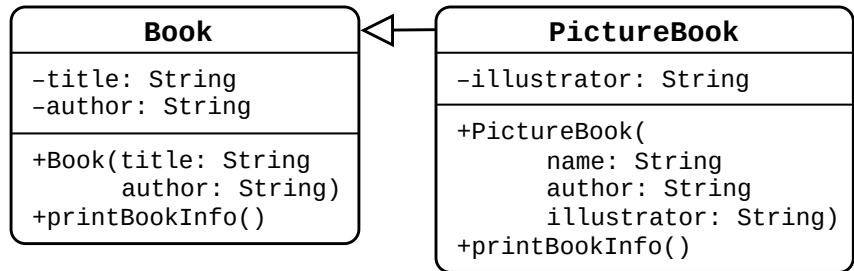

***Expected output***

```
Peter and Wendy, written by J.M. Barrie
```

***Code for Book class***

2. Given the **Book** class implemented in question 1, implement the **PictureBook** class such that the following *Example code* produces the *Expected output*.

**Example code**

```
PictureBook myBook = new PictureBook(
    "Peter and Wendy", "J.M. Barrie", "F.D. Bedford");
myBook.printBookInfo();
```

**Expected output**

Peter and Wendy, written by J.M. Barrie and illustrated by F.D. Bedford

**Code for PictureBook class**

**Worksheet: Writing Classes and Inheritance 2**©2025 Chris Nielsen – [www.nielsenedu.com](http://www.nielsenedu.com)

3. Given the **BOOK** and **PictureBook** class implemented in questions 1 and 2, consider the following example books:

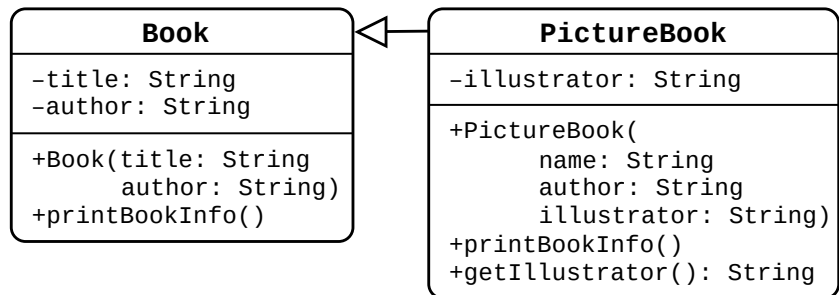

- A book titled *Frankenstein*, written by Mary Shelly
- A picture book titled *The Wonderful Wizard of Oz*, written by L. Frank Baum and illustrated by W.W. Denslow

Write the code segment that performs the following

- declares an **ArrayList** named **myLibrary** that can store **Book** objects
- instantiates a **BOOK** object according to the information about the first book, above
- instantiates a **PictureBook** object according to the information about the second book, above
- adds both book objects to the **ArrayList**.

**Worksheet: Writing Classes and Inheritance 2**©2025 Chris Nielsen – [www.nielsenedu.com](http://www.nielsenedu.com)

4. An accessor method named `getIllustrator` has been added to the `PictureBook` class.

- a) Implement a method named `listIllustrators` that takes a single argument that is an `ArrayList` of type `Book`. The method is to use a standard `for` loop, and for each `PictureBook`, in the `ArrayList`, use the `getIllustrator` method and `System.out.println` in order to print out the illustrator.

```
public static void listIllustrators(ArrayList<Book> myLibrary) {
```

- b) Rewrite the method using an **enhanced for loop**.
