Iteration Worksheet: countTo

After testing your code, carefully copy your countToWhile and countToFor methods into the appropriate box below. Ensure you write your code with proper indenting. Do not include class information, nor the main method.

1.
```
// Method countToWhile
```

2.
```
// Method countToFor
```

After testing your code, carefully copy your code for all three countTo methods into the box below. If there is insufficient room to write the code neatly below, use the back of this paper.
