

Iteration FRQ 1

1. Write the code segment to be used in the body of the method below. The parameter `str` is a properly initialized `String` variable. Your implementation should conform to the example given in the detailed question.

```
public static void longestStreak(String str)
```

- 2a. Write the code segment for the body of the method `getPlayer2Move` in the box below.

```
public int getPlayer2Move(int round)
{
    int result;
    //Your code segment will be inserted here.

    return result;
}
```

Iteration FRQ 1

2b. Write the code segment to complete the method `playGame()` below.

```
public void playGame()
```
