

**Worksheet: Huffman Encoding**

1. Given the phrase: “she sees the three trees”, build the Huffman Tree by following the steps below.

a) Create a tally chart of frequencies for each letter.

| Symbol | s | h | e | space | t | r |
|--------|---|---|---|-------|---|---|
| Tally  |   |   |   |       |   |   |
| Total  |   |   |   |       |   |   |

b) Order the symbols by frequency of occurrence with lower frequency on the left. This is the frequency-weighted priority queue for the data symbols. For symbols of equal frequency, keep the order the same as in the tally chart, above.

| Symbol |  |  |  |  |  |  |
|--------|--|--|--|--|--|--|
| Total  |  |  |  |  |  |  |

c) Draw the first binary tree. This tree will have three nodes – a root with two leaves. Start by creating a new node and setting the first two elements from the priority queue as the left (first element) and right (second element) children. Let the symbol for the root node be *N1*.

d) Complete the priority queue resulting from placing node *N1* back onto the priority queue. Add the new node later than any existing node with the same weight that is already in the queue.

| Symbol |  |  |  |  |  |
|--------|--|--|--|--|--|
| Total  |  |  |  |  |  |

e) Repeat the same process with the next two elements on the queue, creating new node *N2*.

| Symbol |  |  |  |  |
|--------|--|--|--|--|
| Total  |  |  |  |  |

**Worksheet: Huffman Encoding**

f) Repeat again. This time one of the nodes will be a tree. The procedure is not different, however when you draw the tree, it will have three levels and consist of five nodes, three of which are leaf nodes.

|        |  |  |  |
|--------|--|--|--|
| Symbol |  |  |  |
| Total  |  |  |  |

g) Only three nodes in the priority queue. Complete the last two steps and draw the final tree below. Complete the two priority queue steps.

|        |  |  |
|--------|--|--|
| Symbol |  |  |
| Total  |  |  |

|        |  |
|--------|--|
| Symbol |  |
| Total  |  |

h) Write the encoding on the branches of the tree above, then complete the binary code table below.

|        |          |          |          |              |          |          |
|--------|----------|----------|----------|--------------|----------|----------|
| Symbol | <b>s</b> | <b>h</b> | <b>e</b> | <b>space</b> | <b>t</b> | <b>r</b> |
| Tally  |          |          |          |              |          |          |

i) Decode the message: “01011101100000111101011”
